

dhcp-admin 1.0

Installation guide

1. Requirements

- Perl 5.x
- isc-dhcp-server 3.x or higher (*tested on 4.3.3*)

2. Install and setup

- Download the latest version and unpack to: /opt/dhcpadm
- Go to: /opt/dhcpadm/configs
- Edit 'wsp.conf', replace 'address=127.0.0.1' to your IP address
- Edit 'dhcpadm.conf'
 - specify the correct paths for: cmd_reload, cmd_stop, cmd_start, cmd_status and also: leases_file, log_file, config_file
 - specify the correct values for options: omapi_* (and enable it: 'omapi_enable=true', if you are going to use OMAPI)
 - in addition: change password for admin user there
- try to start it:
/opt/dhcpadm/wsp-run.sh start
(press 'ctrl+c' to stop it)

3. Register in systemd

Copy (or make symlink) '/opt/dhcpadm/dhcp-mgr' to '/etc/init.d'

4. Web console

By default web interface available on: <http://127.0.0.1:8080/>
with login/password: admin / secret.
